

ABXOLUT AX5-TW TWIN UNDER SINK HIGH FLOW SYSTEM

The twin under sink water filtration system has long been the most popular choice for residential use, renters and caravan drinking systems. Installing AX5-TW High-Flow system eliminates the need for a separate drinking faucet. It is economical and effective in providing fresh drinking and cooking water at all time.

However, Xsential AX5-TW twin quick-change Hi-Flow system takes the concept even further by making the cartridge last longer. The use of a sediment filter to separate out the particles. This not only prevents the carbon filter last longer, it also help save you money from frequent cartridge replacement.

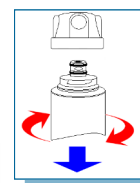

Features:

- Fully Watermark approved (Australian Standard)
- Removes offensive chlorine
- Removes offensive taste and odour
- Reduces cloudiness
- Removes dirt and any other particles
- Reduce pesticide
- No tools require when replacing the filters
