

Decorative Heat Lamps (Straight Retractable Cord Mount)

Specification

1. Power consumption: 250W/230V, DN165 x H (adjustable range 500-1500mm)
2. The heat lamp is used for keeping food warm, decoration, and lighting.
3. The heat lamp lampshade is made of stainless steel, durable, and not easily deformed.
4. The lampshade has heat dissipation holes and uses a high-temperature-resistant ceramic socket, effectively reducing the surface temperature of the shade and making it safer to use.
5. The bulb is explosion-proof; if the glass is damaged, it will not shatter, ensuring the safety of people and food.
6. It is recommended that the distance between the bottom of the heat lamp and the countertop be 450-550mm. If used with a flip-top buffet tray, the distance should be about 600mm.
7. Available in ten colors to suit different scene requirements.
