

RF

LSRF2
LSRF3
LSRF4
LSRF5
LSRF6

- Deck forced refrigeration
- Canopy LED light
- Integral condenser
- Self evaporating
- Foam insulated double skin base
- 65mm deep full size pan supplied

CABINET DIMENSIONS & SPECIFICATIONS

GANTRY SIZES

ELECTRICAL POWER

Electrical power cord 2200mm
3 pin 10 amp 1 phase socket required.

Maximum ambient operating temperature
Climate class N Max 28°C, at 60% humidity

Clean condenser face at two
weekly intervals

LSRF6 3 x Trays

LSRF5 3 x Trays
LSRF4

LSRF3 1 x Tray

Gastronorm pan in pan support
with locking divider bar system

Tray at base level for
maximum depth

Tray at 100mm level for
raised display using supplied
clips

Tray at 140mm level for
maximum depth

LOCKING DIVIDER BARS

- Stainless steel locking divider bars provide the use of multiple gastro pan sizes. The bars can be arranged as required.
- GN 1/1 pans provided by COSSIGA with each LS unit smaller pan sizes arranged by customer and provided by others.

GLFT Flat Top

GLFS Full Square Glass

no doors or covers ensure optimal performance

Cossiga recommend the use of **EXTRACTION FAN** in all unit joinery for refrigerated units

Rear View

Joinery divider panel providing sealed air intake plenum with cutout to meet condenser face

Joinery divider panel between units

Multiple Units - Open Rear Side

Front View

Ideal configuration cabinet open at rear

Cossiga recommend the use of extraction fan in all unit joinery for refrigerated units

LSRF Drop In Cut Outs

Rear View

An extract fan may be required if hot air is not adequately venting

Intake and extract vents. Gauze or similar material allowing good airflow

Island Ventilation - Vented Doors

Front View

EXTRACTION FAN

- Extract hot air from box joinery
- Fan and power cable supplied, screw fixed to joinery
- Electrical power cord 2000mm 3 pin 10 amp 1 phase socket required
- Fan 230v ~ 50Hz - 60Hz - 19 Watt in stainless steel case
- Cossiga part number X000611 Extraction Fan

VENTILATION GRILLE

- Stainless steel construction
- Hole cut out size 540 mm x 298 mm
- Square grille holes 10mm x 10mm
- Cossiga part number X000765 Ventilation Grill
- Screws not included

Plumbed drain to waste

Join to condensate waste spigot in compressor unit

PLUMBED DRAINAGE TO WASTE

- follow all local plumbing and building codes
- Building waste by client

DRAINAGE RECOMMENDATIONS

As standard units are self evaporating to a receptacle in the condenser unit. Should excess water be generated due to high temperature or humidity, a secondary reservoir should be provided.(by others)

Alternatively, If waste piping is present we recommend plumbing unit in.

- Removes the need for and electric evaporation pan
- Creates less heat
- Uses less power

On new builds the RF unit is often next to a Bain Marie unit which requires waste drainage

PLUMBED TO WASTE
LOWER RUNNING COST
LOWER SERVICE COST

Additional support may be required under bench ie. stainless steel hollow section to frame

Counter top joinery must be of sufficient structural capacity to take the weight of the LS unit when the flange detail has been made.

ACRYLIC NIGHT COVERS

For LSRF units with flat top glass.
Provides product protection over night
or when needed.

Sits above air flow system so cool air
circulation is maintained.

Acrylic panel with hole for easy placement.

TWO SIZES

- Allows for all unit lengths

LSRF BRACKET

LSRF CONTROLLER SIZE

BRACKET
ORDERED
AS AN
OPTIONAL
ACCESSORY

Meltica MDF panel
or similar

Bracket screw fixing
to panel

Locations to avoid

- Drafts from doorways
- Airflow from air-conditioning ducts
- Hot air from motors i.e. refrigerators
- Direct sunlight

Disrupted air flow

Heat from other equipment and natural conditions, such as direct sunlight straight on units, can cause cooling to fail and overload compressor

Mechanical air flows, such as diffusers and fans can disturb the air curtain on units causing failure
